

# Streamline Complex Workflows at Scale

## What We Do

It is our promise at Lateetud to provide boutique-level custom services that help to eliminate mundane tasks and improve overall employee bandwidth in the workplace. With our little-to-no-code system of solutions Robotic Process Automation, Business Process Management, and Advanced Data Intake, we create one system to translate, streamline, and process information from start-to-finish, no matter the format or complexity.

## 3 Solutions, 1 System

### Robotic Process Automation

Mimics human behavior to read screens and perform tasks at scale based on your business needs. RPA is the utilization of a virtual workforce that allows your employees to focus less on mundane tasks and more on tasks that bring value to your company.

### Business Process Management

Models complex processes and connects people using little-to-no code. BPM is the main operating base helping to streamline multiple workflows by monitoring the processes from RPA and Advanced Data Intake.

### Advanced Data Intake

Processes, reads, and extracts structured and unstructured data in real-time. Advanced Data Intake is the solution that starts the system - pushing data into Robotic Process Automation. This solution helps to reduce the data error rate.

## Why Lateetud

**100%**

Reduction in human error

**80%**

Reduction in time spent on data processing

**12 mo.**

To achieve ROI

**90 Days**

From initial training to go-live date
